

EXPANSION KIT

ASSEMBLY INSTRUCTIONS

These instructions will walk you through the process of adding an expansion kit to any Boltz CD / DVD / Multimedia rack, so your rack may not look exactly like the rack in the instructions. If you have any questions about your expansion kit, please contact us at 877.804.7650 Monday - Friday 8:00 - 5:30 central time.

STEP 1.

Remove all cap nuts from the end panel on the side of the rack you want to expand. These cap nuts will be used to secure the expansion kit in step 4. If you have installed the optional feet to the rack, remove it as well. It will need to be attached to the outside of the expansion kit panel in step 4.

STEP 2.

Attach and completely tighten the coupling nuts to the ends of the rods on your existing rack.

STEP 3.

Install and completely tighten all expansion kit rods into coupling nuts. It is normal to have some threads still exposed past the coupling nut even when the rods are tightened completely. Insert rubber grommets into the holes of the sliders then insert sliders onto the outside rods of each tier. (You may want to look at your existing rack to see which rods the sliders should be installed on.)

STEP 4.

Screw flange nuts head first onto the end of each rod. Again, you may want to look at your existing rack to see how the flange nuts should be installed. Slide Expansion kit end panel onto rods and then secure by using the cap nuts removed in step 1. If feet are being used, attach the foot removed in step 1 to the Expansion kit end panel prior to putting cap nuts on last two rods.
